BLASTING SHOP	
BRIEF DESCRIPTION	PHOTOGRAPHS
The blasting shop is used for surface preparation of metal components by removing rust, scale, old paint, and other contaminants using abrasive blasting. This process provides the required surface profile for subsequent coating applications.	 A wide-angle photograph of a large industrial facility, identified as a blasting shop. The interior features a high ceiling with a complex network of steel trusses and numerous skylights that provide natural illumination. In the center of the frame, a large, dark, cylindrical industrial tank or container is visible, with the letters "SPT" printed in yellow on its side. To the right of the tank, several long, horizontal metal pipes or structural beams are stacked in a neat row on the floor. The floor itself is a light-colored, polished concrete surface. In the background, more industrial equipment and structural elements are visible, including a yellow overhead crane system. The overall atmosphere is one of a well-maintained, functional industrial environment.
